

## **FILLRITE WAX POLISH**

### **Description**

This product is formulated with carefully selected waxes to provide protection to paint techniques on cementitious and wooden substrates. Fillrite's water based wax polish creates special effects and finishes when used on paint techniques or with Fillrite's chalk paint. The underlying paint is enriched and colours appear more prominent.

### **Application**

Apply Fillrite's soft wax liberally over the surface with a cloth and allow a couple of minutes to dry before buffing. After buffing an elegant sheen finish should result enriching the underlying chalk paint or paint technique. When allowing longer drying times before buffing it will be slightly more difficult to work with.

Distressed finishes requires rubbing with a 300 grit sandpaper after application of the soft wax. Wax again and buff as described above.

### **Technical Data**

Consistency Soft paste

Relative density 0.99 kg/l

Solvent Water

Melting point of waxes 72°C

### **Safety**

Product is water based, not hazardous and safe to work with. Store out of direct sunlight in a cool, dry area. Wear protective gloves when working with this product as repeated contact might dry out the skin.

Harmful if swallowed. Drink lots of water. Do not induce vomiting. Consult a doctor immediately.

Material Safety Data Sheet is available on request.
